2019 G-SURF hosts poster session

- GIST (President Kiseon Kim) College (Dean Yong-Ju Lee, Professor of Liberal Arts and Sciences) held the "2019 G-SURF * Poster Session" in the lobby of GIST's Oryong Hall on August 27, 2019.

* G-SURF: GIST Summer Undergraduate Research Fellowship that is benchmarked with Caltech's SURF program

- G-SURF, which has been held every summer since 2011, is a research program that was modeled after the Caltech Summer Undergraduate Research Fellowship, and it is very popular with students.
- GIST College students who participate in G-SURF gain essential laboratory experiences by applying their scientific knowledge to real-world research in a GIST graduate laboratory while receiving mentorship during their summer vacation.
 - This year, a total of 48 students carried out research projects with 33 graduate professors and had the opportunity to present their results through a poster presentation.
 - G-SURF participant Jae-young Ahn, a junior EECS major who performed research in the School of Electrical Engineering and Computer Science Professor Jonghyun Choi's Computer Vision Lab, said, "It was a most rewarding and meaningful experience to write my research topic in the form of

a journal paper, to make a poster, and to carry out the research from start to finish."

- G-SURF participant Dong-ho Kim, a senior materials science major who performed research in the School of Materials Science and Engineering Professor Sanghan Lee's Functional Nanostructures & Nanoelectronics Laboratory, said, "Although I was frustrated at first because the results of the experiment were not coming out well, it was a meaningful time for me to learn how to systematically design and proceed with the experiment systematically from seniors in the lab."
- GIST College will select the best G-SURF reports submitted by the students to have them published in the Korean Journal of Undergraduate Research (KJUR), an English language journal.
